

MicroGrid Kits

Established Fuel Saving Solution

MICROGRID SYSTEM

LEX is the only source approved OEM manufacture of the Microgrid Kit. To date several hundred systems have been produced throughout the last 4 years maintaining 100% quality and delivery performance.

Microgrid kits cuts fuel consumption dramatically while also load balancing between generators for optimum efficiency.

The key components of the Microgrid Kit are the Microgrid Feeder Box, Parallel Communication Interconnect Boxes (PCIB) and associated cable assemblies.

EXAMPLE OF A MICROGRID SYSTEM

The Lex Microgrid Kit is designed to automatically start and stop Advanced Medium Mobile Power Sources (AMMPS) generator sets (30kW or 60kW) in pairs of two based on power demand. Connecting (3) Kits together will provide for a Ring Bus Microgrid for up to six generators.

The Microgrid Kit includes all components necessary to build an AMMPS Microgrid except for the AMMPS Generator with Advanced Digital Control System (ADCS). Lex also provides the equipment necessary to connect the downstream loads to the AMMPS Generators providing the source power for the microgrid. Without our piece of the puzzle you cannot take advantage of the benefits provided by the managed power generation of the AMMPS.

STOCK LOCATIONS: DAVIE, FL

For over 30 years Lex Products has provided custom engineered solutions and durable products for the some of the most critical applications where portable power is needed.

Lex specializes in products designed to withstand rough use and harsh environments. This brochure displays a selection of offerings, specific to disaster relief and temporary shelter power applications.
